

AMENDMENTS TO THE ABSTRACT OF THE DISCLOSURE

Please amend the Abstract by rewriting same to read as follows.

In a casing body 1 of an audio device that includes a main body 2 and a front surface panel 3 formed to protrude outside from an upper surface and side surfaces of the main body 2 and ~~has~~ having a sharp edge 43 formed at the corner part 41 of the rear end face of the front surface panel 3, a small boss 45 is formed inside the sharp edge 43. When a finger touches the sharp edge 43, a force concentrated on a point of the sharp edge is dispersed to two points of the sharp edge 43 and the boss 45 due to the ~~provision~~ action of the boss 45. Accordingly, even when the user's finger touches the sharp edge, a fear that the finger is injured is decreased. Since the boss is provided inside the sharp edge, an external appearance ~~as~~ employing the sharp edge can be maintained in view of its design.
